Womyns'Ware Sex Toy Guide

The *Womyns'Ware Inc.* Sex Toy Guide is called a "Guide" rather than a "Catalogue" to indicate to the reader that these materials do more than simply present products available for purchase. We've created an educational tool as well as a shopping guide.

We address how the products function in relation to how people's bodies respond to erogenous contact, solo or with a partner. It's the sexual objective of our customers, our self imposed product design and quality guidelines, and the anatomy of the human body that determines what goes into our guide. *Womyns'Ware Inc.* exists because of our belief that women's sexuality should be celebrated and our desire to offer an environment, products and services to empower women sexually.

vibes & dills

We've made a very conscious decision to include only quality products in our inventory to save on your heartache. You may have seen products that appear to be less expensive but we caution you to look closer – many use inferior electronics, shoddy operational components and cheap material and so not surprisingly are unreliable and have a short life expectancy. We are the only sex toy retailer to eliminate cheap electronics and unhealthy rubber and soft vinyl products from our inventory.

CHOOSING A VIBE

Ask yourself some questions. Do you want something for clitoral or penetrative stimulation, or both? Do you require lots of vibration or prefer quieter operation and increased mobility? We classify our vibes by intended use and mode of operation.

VERSATILE DILDOS

Dildos are ideal for penetration. On their own or combined with a vibe, silicone dills are the longest lasting, easiest to clean toys for vaginal, anal and depending on design or accessories, clitoral stimulation.

health

WHY SILICONE

Silicone is so perfect for a penetrative toy that it's the only material we recommend. Silicone will hold it's shape while being flexible enough for internal comfort. It conducts vibration so you can use it to achieve both penetrative and clitoral stimulation together. Silicone is not absorbent so it doesn't retain smell or bacteria. Unlike rubber or soft vinyl it won't leave fragments behind in your body or leach toxins.

LUBES

Don't let anyone tell you, "If you are really turned on you won't need a lubricant." We women of Womyn'sWare Inc. think there is nothing sexual you are doing that won't be improved with lube. We never recommend lubes with ingredients likely to cause irritation. All are non-staining and latex safe.

STD BARRIERS

When we decide what latex products to carry there are two essential qualities that we look for. First the product has to have a low protein content to minimize triggering latex allergic reactions. Second, the product has to be well designed. Safer Sex should be made easier not yuckier. High approval ratings for comfort, sensitivity, and non-allergenic materials are key. In addition, we make sure to carry polyurethane barriers for those allergic to latex.

nipples & butts

NIPPLE CLAMPS

If you enjoy some nipple contact or have generally unresponsive nipples, you may be pleasantly surprised at the erogenous potential of a simple nipple clamp.

ANAL TOYS

There are a wide variety of butt toys. We only sell products that have a flared base and thus can not be lost in the rectum, have no rough edges and if longer than 4" are flexible enough to not cause damage. Whether it is beads, plugs, hybrids, dills or vibes each toy lends itself to an entirely different stimulation. We recommend reading our sex toy guide or visiting our website to find out more.

When it comes to anal play, at Womyn'sWare we have two mantras: use LOTS of lube and then some more, and use a silicone toy which can be sterilized.
